The *Gauntlet* is the official student newspaper of the University of Calgary, published most Thursdays throughout the year by the Gauntlet Publications Society, an autonomous, incorporated body. Membership in the society is open to undergraduate students at the U of C, but all members of the university community are encouraged to contribute. Opinions contained herein are those of the individual writers, and do not necessarily represent the views of the entire *Gauntlet* staff. Editorials are chosen by the majority of the editorial board. The *Gauntlet* is a forum open to all U of C students but may refuse any submission judged to be racist, sexist, homophobic, libelous, or containing attacks of a strictly personal nature. We reserve the right to edit for brevity. Grievances regarding the *Gauntlet* follow a three-step process which requires written decisions from the Editor, the GPS Board of Directors, and the Ombudsboard. The complete Grievance Policy is online at: thegauntlet.ca. The *Gauntlet* is printed on recycled paper and uses a green based ink. We urge you to recycle/give up the *Gauntlet*.

Letter Policy

Letters must be typed, double-spaced and received by Monday at 4 p.m., and must include the author's name, student ID number, telephone number and signature. Letters will not be printed if they include attacks of a strictly personal nature, statements that discriminate on the basis of race, sex, or sexual orientation, or libelous or defamatory material. All letters should be addressed to "Editor, the Gauntlet," and be no longer than 300 words. The *Gauntlet* retains the right to edit submissions. Letters can be delivered or mailed to the Gauntlet office, Room 319 MacEwan Students' Centre, or sent by email to editor@thegauntlet.ca.

Vote splitting dooms Calgary Centre

By 10:45 p.m. on Nov. 26, a palpable sense of profound disappointment was setting in at the Liberal headquarters of the Calgary Centre by-election. Calgary Centre, a riding that has been conservative for almost half a century, will be blue once again. Conservative candidate Joan Crockatt won the by-election with 36.9 per cent of the vote. Liberal candidate Harvey Locke was an excruciatingly close second, garnering 32.7 per cent of the vote.

After the grassroots success of Mayor Naheed Nenshi's campaign in 2010, many have become politically engaged to a degree hitherto unseen in Calgary. In a city known for low voter turnout and remarkably predictable results, Nenshi proved that it is valuable to engage with young people in Calgary and that a motivated youth vote is a dangerous political tool in this city.

However, with the shockingly low voter turnout for the federal by-election of under 30 per cent, the Conservative candidate will once again be off to Ottawa from Calgary Centre, filling the seat left vacant by Lee Richardson, who took a post with Premier Alison Redford's provincial Conservative party.

The entire night smacked of missed opportunity. The Green Party's Chris Turner finished third with 25.6 per cent of the vote, sapping votes from the Liberal candidate and vice versa. The opportunity was not simply to unseat a Conservative MP, this by-election was a chance to communicate strongly to the federal government

and to demonstrate that Calgary is a relevant place to campaign for all parties.

The federal Conservative party has disrespected the intelligence of voters in Calgary for too long by offering incompetent candidates and refusing to engage with voters during campaigns. This by-election was no different. Crockatt repeatedly ducked public forums, which drew the ire of Mayor Nenshi.

When Crockatt announced she would be missing the Nov. 19 City of Calgary sponsored "cities matter" debate focusing on urban issues, Nenshi said, "if I were [Crockatt's] political strategist, I certainly wouldn't miss this. She'll make her own decision. I just hope that it's not because she doesn't want to answer questions about the future of Calgary." Crockatt — mirroring Rob Anders's infamous public-forum dodging — claimed that she was door-knocking, which, in her view, was a more effective way of engaging with voters.

Nenshi's comments put pressure on Crockatt to attend the debates later on in the campaign where she noted that she supported cuts for

the CBC because the French language channel supposedly broadcasted pornography.

"As long as they're still funding some porn channel on the web, there's going to be people who look at the CBC and say there's still room for cuts," said Crockatt. "Just research it on Google — it's there." Many in Calgary Centre do not agree with her controversial position regarding the CBC or her assertion that Calgarians would support more Chinese investment similar to the purchase of Nexen because, as Crockatt said on Nov. 19, "our largest trading partner in the U.S. is a basket case financially and we need to start looking for other markets."

The proof of dissent against Crockatt lies in the evidence that the majority of Calgarians in her constituency voted against the Conservative government, a fact that brings little solace now that the results are all counted. If the Green Party candidate or NDP candidate had thrown their support behind Locke, there is no question that it would have been enough to swing the balance of the by-election. However, when the Green

Party's Turner was interviewed post-election, he mentioned that he understood the dangers of vote splitting but didn't think it was wise to compromise so late in the game and that polling data is notoriously unreliable.

While the comment about polling data is valid, it should have been obvious that there was precious little chance of anyone beating a Conservative months ago, and an infinitesimally smaller chance of that person being from the Green Party. When it started to look as though the race would be close — close enough that the Liberals had a shot at beating Crockatt — someone, be that Green or NDP, should have made the call to unite the vote and do what was necessary. This is not Vancouver Island, Montreal-Papineau or Toronto-Danforth. It is Calgary-Centre, a city that has not elected a federal Liberal since Trudeaumania in 1968, and has only elected three MPs in Canadian history that were not ideologically conservative. Now that all three non-conservative parties have lost, one can only hope the message that was sent was loud enough to demand attention from the federal government. Perhaps future elections will not only be as interesting as this one, but will also produce significant results.

It is undoubtedly important to vote one's conscience, but when a political party holds the reigns of a city so tightly and so far beyond the point of complacency, pragmatism must prevail over ideology.

Undergrads get research recognition

Students from all faculties showcase their hard work

Fabian Mayer

Gauntlet News

The University of Calgary's seventh annual Undergraduate Research Symposium is giving 84 students a chance to showcase their research to the campus community. Over \$20,000 is available to be won by undergraduates from all faculties on Nov. 29 in MacEwan Hall.

Students' Union vice-president academic Kenya-Jade Pinto said the URS has a diverse range of topics and research that will be presented on.

"The beautiful thing about the Research Symposium is that it caters to all faculties. We do traditionally have students who apply from science and medicine, but we also have students applying from faculties that you traditionally would not think do research, which is really neat," said Pinto.

She said the event is integral to the university's Eyes High objective of becoming a top-five research university by 2016.

"Something like the URS is a real way that students can participate," said Pinto. "It's going to be the type of thing that brings us to that goal."

Participants had to present their abstracts to the SU prior to the event. Last year's event had 130 participants. Pinto said the decrease for this year to 84 participants was because a selection committee, which is new this year, went through the abstracts to pick the best topics for the event.

"Part of the reason why there was a decrease this year is because we did have a selection committee that was diligent in going through the abstracts and really picking

courtesy Gene Baines

The Undergraduate Research Symposium is an opportunity for students to showcase their research.

the best of the best," said Pinto. "We really wanted to select students that stuck out."

On Nov. 29, the event will begin with a poster competition that will be judged by 33 university professors and staff. The researchers with the best projects will be given prizes of \$500–1,000, donated from U of C departments and faculties. Winners will be announced in early December.

Fourth-year health sciences student Stefana Pancic will be presenting on building the research capacity in Ethiopia. She was able to undertake her study by helping

teach a molecular biology course in Ethiopia.

"It was a two-week-long course and basically we were teaching molecular biology techniques. My project was to evaluate the course and see how successful it was," said Pancic.

The effectiveness of the course was gauged by a variety of measures, including surveys, tests and focus groups. Pancic found that the course was successful in teaching Ethiopian students basic molecular biology techniques.

Pancic said she wanted to present her findings at this year's URS

to bring attention to less traditional forms of health sciences research.

"There are a lot more research fields than just the typical biomedical sciences, such as cancer biology for example. There's a lot more to human health than just that and I'd really like to share that with other students and maybe inspire them to pursue some other research opportunities," said Pancic.

Fourth-year psychology student Tiffany Haig has been researching biological stress mechanisms of pregnant women, specifically how cortisol affects stress and sleep.

"The work that I did over the summer was looking at the psychobiology of stress in maternal sleep during pregnancy," said Haig. "We measured cortisol in pregnant women, and looked at how it is associated with different sleep variables."

Haig said events like the URS show the community the U of C's commitment to research.

"It suggests the university's commitment to knowledge generation and research activity in the school and in the community," said Haig.

Haig hopes to eventually go to medical school.

"It will help me to train as a researcher and be able to share the research that I do with other people," said Haig.

The Taylor Family Digital Library will be showcasing URS posters on the media screens on the first and second floors.

Pancic said the symposium is very important for the university community and provides an opportunity for students to discover different ways to get involved.

"Sometimes pursuing research can be something really intimidating for a lot of students. Coming to something like the URS really gives them some motivation and inspiration to know that they can do these kind of things at the U of C and these opportunities are available to them," said Pancic, a sentiment that is echoed by Pinto.

"It's really important for students to try new things, to engage in research, to step out of their comfort zone and to use their curiosity in the best way possible," said Pinto.

Anyone is welcome to attend the event on Nov. 29.

Club space to receive \$38,000 facelift

Michael Grondin
News Editor

“The Hive”, a club space located beside Stör, will be getting a much-needed renovation next summer to increase space and functionality for the 292 clubs that use it. Consultations with U of C clubs are currently underway to ensure the upgrades meet their needs.

Quality Money will fund the renovation. The proposal was brought forward by last year’s Students’ Union vice-president student life Matt Diteljan and vice-president operations and finance Patrick Straw.

The Stör renovations that occurred this past summer took some of the space from “The Hive.”

Current SU vice-president student life Hayley Wade said over 75

per cent of clubs are anticipated to be consulted prior to the renovations.

“The proposal was approved for almost \$38,000 for the renovation. We are now in the process of consulting students on what they would like to see done with that space,” said Wade. “We will be going forward with construction this summer.”

She said the improvements will include increased storage and more room for clubs to meet.

“It really depends on what students want to see done. We are in the process of sending out a survey as well as using focus groups to find out exactly what will make that space better for clubs,” said Wade. “We are really excited to hear what clubs have to say, and we are excited to gather all of their feedback.”

Second-year mechanical engi-

neering student and vice-president promotions of the Ski Club Simon Butt-Vallieres said he is excited about the renovations.

“I can’t wait to see it renovated. It will definitely be a great thing because I spend a lot of time in [there],” said Butt-Vallieres.

He said the major issue with club space is sharing tiny offices. He also expressed issues with Internet connections.

“It’s sometimes a hassle for space,” said Butt-Vallieres. “If we didn’t have so many clubs in one office it would make things way better.”

Fourth-year kinesiology student and vice-president administration of the Orthodox Christian Fellowship club Marina Rofaeil said club space needs upgrades.

“It does serve its purpose right now, but it’s outdated for sure. It sometimes gets really cramped

Michael Issakidis

There are almost 300 clubs using the U of C’s club spaces.

and it can be hard to organize,” said Rofaeil.

She said many clubs are not given access to private offices, which can be frustrating.

“It’s needed. I think more offices would be nice. Not all clubs got a chance to have an office — it would be good for all clubs to have that opportunity,” she said.

Conservatives win Calgary Centre

Riley Hill
News Assistant

Conservative candidate Joan Crockatt won the Calgary Centre by-election on Nov. 26, defeating Liberal candidate Harvey Locke by just over a thousand votes. The win was a close, three-way race between the Conservative, Liberal and Green candidates in a district that has consistently voted conservative since its creation in 1966.

Crockatt received 36.9 per cent of the vote, with Locke close behind at 32.7 per cent. Green Party

candidate Chris Turner also made a strong showing, receiving 25.6 per cent of the vote. The NDP, Libertarian and independent candidates received under five per cent collectively.

There was a low voter turnout, with fewer than 30 per cent of eligible voters showing up to the polls.

Crockatt is a former journalist who used to work on the editorial board of the *Calgary Herald*.

The 36.9 per cent that Crockatt received was significantly lower than the 57.7 per cent former

Louie Villanueva

The Calgary Centre by-election on Nov. 26 voted in Conservative candidate Joan Crockatt.

Conservative Calgary Centre MP Lee Richardson received during the 2011 federal election. Richardson left the spot vacant to take a position as Premier Alison Redford’s principal secretary.

Calgary has not elected a non-conservative MP since 1968, when Liberal Patrick Mahoney won in Calgary South.

The tight race leading up to the election received national

attention. Green Party Leader Elizabeth May and Liberal Party leadership frontrunner Justin Trudeau both made visits to the riding during the Calgary Centre campaign.

U of C assistant professor leads social effort in Haiti

Michael Grondin
News Editor

University of Calgary social work assistant professor Carmen Logie has been leading an initiative in Haiti to prevent the spread of sexually transmitted diseases and educate women on mental health and social work.

Haiti is the poorest nation in the Western Hemisphere and has the highest rate of HIV per capita. According to Logie, the earthquake that struck Haiti in January 2010 also added to local struggles. The initiative trained eight local women in Leogane, the epicentre of the earthquake, to be community workers.

The project began in July 2011. Logie visited Haiti six times in the course of a year to monitor

the program's progress.

"Since the earthquake, Haiti's social, economic and health infrastructure has collapsed, and we really didn't know very much at all about the situation regarding HIV in post-earthquake Haiti," said Logie.

Phase one of the initiative was funded by a Grand Challenges grant of \$100,000. Grand Challenges Canada is an organization that promotes innovative solutions in the developing world.

"We trained women who were displaced — women who lived in tents after the earthquake — to be community health workers and to do HIV and STD education with 200 other women," said Logie.

Solar-powered tablets were also used to showcase surveys and educational material to locals.

"We worked individually with

the women. We also created a video that we put on tablets. There was a six-week program of weekly women's meetings where the women gathered together and learned about different issues," she said.

Logie said one of the main goals of the project was to promote sustainability and capacity among locals.

"I think it's very important to work on projects that build capacity with local people. We were hiring and training local women so they can then become leaders in their community," said Logie. "They can then become educators and work to help other people."

According to Logie, surveys conducted after the program showed promising results.

"I've been analyzing the data and developing plans to scale the

courtesy U of C

Carmen Logie has been leading a social work program in Haiti.

project up. We've found that we've reached our main goal, which was to increase HIV knowledge in Haiti," she said. "We achieved many of our secondary objectives to decrease depression and increase condom use."

Logie has been presenting her findings to post-secondary institutions, including McMaster University, Dalhousie University and the U of C. She will present her findings to the Grand Challenges Foundation this December for an

additional grant of \$1 million to expand the project.

"When working with marginalized people, you need to also focus on the whole person and helping them in all areas of their life, and give them tools they can use," said Logie. "We didn't just focus on HIV. We also focused on healthy relationships, communication, mental health and coping with trauma."

Logie will be seeking help from the U of C community to expand the initiative.

Improving mental health in Afghanistan

U of C medicine professors promote mental health care and decrease stigma

Salimah Kassamali

Gauntlet News

University of Calgary professors have been given a \$19.4 million grant to improve mental health care in Afghanistan. The funding was provided through Grand Challenges Canada, an organization that funds research and innovative projects in the developing world.

Faculty of medicine professors Richard Scott, Scott Patten and Mone Palacios will be leading the project. The research will use e-health, a method of incorporating technology to increase knowledge of mental illnesses in developing countries, mainly using cellphones and telecommunication. The initiative will also be training health-care workers in the northeastern province of Badkshah, Afghanistan.

According to the World Health Organization, about 75 per cent of people with mental health disorders live in developing countries and 85 per cent of those affected do not receive treatment.

Afghanistan does not have a regular budget allocated for mental health and less than one per cent of all health expenditures in 2004 were directed towards mental health.

"Mental health disorders are a leading cause of suffering and disability everywhere, but the problem is especially acute in the developing world," said chief executive officer of Grand Challenges Canada Peter A. Singer in a

U of C press release. "There is very little funding for mental health innovations in low- and middle-income countries, where mental illness is the most neglected of many neglected diseases. It's a terrible denial of human potential."

The U of C will be collaborating with the Aga Khan University, an international university based in Pakistan, as well as with local psychiatrists in Afghanistan.

"The project is fairly complex and it involves several components. Part of it involves doing some surveys and trying to understand the level of awareness and knowledge about depression as well as looking at stigma," said Patten, who will be working with the team as an epidemiologist and psychiatrist.

Stigma is one of the major roadblocks to mental health alleviation and may lead to work place discrimination. According to the WHO, many people perceive those affected by mental illness to be dangerous and aggressive. This is a misconception that may lead to social isolation.

"The local people in Afghani-

stan and the specialists at Aga Khan believe that a good place to start is with knowledge," said Patten.

Part of the project will involve local community health workers to act as the first point of contact for many patients. Distance technologies such as cellphones will be used to increase communication, especially to establish consultative links between health workers and specialists. The final part of the project is to improve information and record keeping, said Patten.

"It is at a planning stage, so we are holding weekly teleconferences and so far what has been accomplished is consultation with local professionals in Afghanistan and a selection of districts to be included," he said.

Patten said that there will be follow-up consultations, interventions and repeat survey work to see if there is improvement of mental health care in the region.

"It is a key part of the Grand Challenges grant that everything be evaluated. The proposal does not include specific targets, but it does include fairly specific goals

and part of it is looking for higher levels of knowledge and lower levels of stigma," said Patten.

He said that, in addition to survey work, there will be consulta-

tion with community and religious leaders to best decide how to carry out education sessions.

Engaging young students in math

Riley Hill

News Assistant

Canadian Oil Sands Limited, an investment company, has recently launched Math Minds, an initiative aimed at making math more accessible to elementary students. By creating a network where teachers can share the latest research in math education, instruction and strategies for student learning, Math Minds hopes to strengthen teachers' understanding of math instruction.

The initiative was unveiled on Nov. 26 at St. Rita Elementary School. The event included Uni-

versity of Calgary research chair in mathematics education Brent Davis and four-time Olympic gold medalist Hayley Wickenheiser.

The initiative is in partnership with the U of C faculty of education, as well as a number of other educational organizations, including the Calgary Catholic School District, Calgary Public Library and the Boys and Girls Club of Calgary.

Math Minds places improving mathematical literacy as its number one priority. It is hoped that, through this initiative, Alberta students will be more com-

petitive in their future bids for employment.

In a U of C press release, president and chief executive officer of Canadian Oil Sands Limited Marcel Coutu said he felt math was important to Canada's economic future.

"In order for Canada to remain globally competitive, it is imperative that our society places high importance on early math literacy," said Coutu. "Canadian Oil Sands Limited is excited to champion Math Minds and empower children by becoming math literate through a long-term, collaborative, foundation-building approach."

U of C's drama department presents two plays about the struggle for survival

Problem Child and *Risk Everything* are both a part of the *Suburban Motel* play collection, and both focus on the lives of the downtrodden RJ and Denise.

courtesy Aaron McCullough/Red Dot Photography

Alicia Ward

Gauntlet Entertainment

George F. Walker is a playwright known for placing people in impossibly complicated situations that only get worse, while presenting his characters and their choices in a way that forbids the audience from judging them. In the University of Calgary drama department plays *Problem Child* and *Risk Everything*, the characters RJ and Denise are in the midst of a battle with social services to win back their baby, Christine, while dealing with the mysterious intentions of Denise's mother.

"The play is about this couple who, basically, are just not on the high end of society," explains Jonathan Brower, a U of C drama student playing RJ. "You gather from all the characters that they've all had a rough life."

Both of these plays are from *Suburban Motel*, a collection of plays written by Walker, and will be running on alternating nights from Nov. 27 to Dec. 8 at the

U of C's Reeve Theatre. Each play in the collection explores tough decisions that need to be made to ensure survival — the characters in *Problem Child* and *Risk Everything* face death, consumption by their obsessions and emotional disparity at almost every turn.

/// We all have these things that we do to justify how we live our lives. We all have our little vices.

— Jonathan Brower, U of C drama student

"You have four different perspectives of what it means to live your life when you're hoping for something," says Brower.

Sheena Olsen, who plays Denise, recognizes that the plays also express a hopeful optimism towards the future.

"I almost feel like [Denise] always has a desire for something better," says Olsen. "She doesn't necessarily know how to get to that better life but she knows that there is a better life, and she sees

Christine as one of the ways to get there."

Denise is driven to get her baby back, and it is loss that fuels this drive — her baby was what gave her life value. Although the audience gets to know Denise and RJ intimately throughout the two

plays, the question of what is best for the baby still exists. The situation for Denise is made worse by the obsession her husband has for reality television.

"For RJ, value is in what he sees on television," says Brower. "His relationship with Denise, I think in his eyes, would be perfect if she was right by his side enjoying what he enjoys. He used to have this really wild lifestyle. He was in prison for three years and probation for two years, and he left that really

risky lifestyle behind and now he's this boring guy who loves television."

In order to understand his character, Brower watched reality television to the point of obsession and found that it was easy to become emotionally invested in what was happening episode to episode.

"RJ is escaping from his reality, and I think I really saw what that means to escape from reality by watching television," explains Brower. "It's an interesting commentary on what we do as a society. Many things aren't considered addictions but actually take us away from living a meaningful life."

For Brower, both of Walker's plays bring up interesting questions about what makes life valuable and important. Both plays question if it is ever too late to change oneself, find redemption and lead a life fully present in every circumstance and relationship. They explore vices and difficult choices based on the state of being a person is in, and the audience is given a perspective on dire condi-

tions, last resorts and the inability to escape a life you are born into. Walker displays life without glory, and presents his characters as merely human. For Brower, this makes the characters relatable and understandable.

"We all have these things that we do to justify how we live our lives," says Brower. "We all have our little vices. Are we doing what we need to do to not just survive, but thrive?"

While Brower sees the plays as a highly reflective experience for the audience, Olsen notes how admirable the characters are, and that they may have traits to look up to.

"What I love about Denise is that when she sets her mind to something, she gets it done," explains Olsen. "She also has a very realistic perspective of the world. I wouldn't say that it's necessarily an optimistic perspective, but she sees things for what they are, which I respect a lot."

Problem Child and *Risk Everything* will be showing at the Reeve Theatre from Nov. 27 to Dec. 8. For more information visit drama.ucalgary.ca.

courtesy Trépanier Baer Gallery Inc.

A brilliant, beautiful *Mosaic*

Ron Moppet, one of Canada's foremost contemporary artists, has opened a new exhibit at Calgary's Trépanier Baer Gallery Inc. Entitled *Mosaic*, the exhibit will feature work from different periods of Moppet's career, along with several new paintings and drawings. Moppet's art draws from a variety of diverse styles, and his pieces often feature brilliantly vivid colours. The gallery runs from Nov. 24 to Jan. 5. More information can be found at trepanierbaer.com.

is hosting a Handicraft/Artisan Christmas craft fair on:

THURSDAY December 6th, 2012
10:00 am to 4:00 pm

University of Calgary - MacEwan Student Centre
North & South courtyards

We are proud to support Local Alberta Artisans!

NEW THIS WEEK

Killing Them Softly — Starring Brad Pitt and that guy who played Tony Soprano (James Gandolfini), this film tells the story of a mob enforcer attempting to restore order in the local criminal economy. Expect high-brow mafia shenanigans.

The Collection — A sequel to 2009's critically panned *The Collector*, this bloody-looking horror film will most likely not win many new fans over to the slasher genre.

Guardians of Middle Earth — A team-based strategy game set in the world of J.R.R. Tolkien's *The Lord of the Rings*, players will be able to control beloved characters, such as Gandalf, Legolas and Hildifons.

Mass Effect Trilogy — A collection of all three games in this immensely popular series, this release is perfect for those who have yet to experience this gripping, convoluted and controversial science-fiction epic.

Warrior — Hip-hop star Ke\$ha is releasing a new album, which apparently has an overall theme of "magic." Just a reminder that she apparently scored 1,500 on her SAT.

Movie review: *Anna Karenina*

This adaptation of a literary classic is all style with little substance

Matthew Parkinson

Gauntlet Entertainment

A *Anna Karenina*, a costume drama set in late 19th century Russia, is perhaps the most approachable of director Joe Wright's films. It marks his third collaboration with Keira Knightley, who previously starred in *Pride and Prejudice* and *Atonement*. For *Anna Karenina*, he adapts Russian author Leo Tolstoy's novel of the same name. Like other films in the genre, it's long, emotionally vapid, predictable right up to the end and really good looking. Essentially, it's everything that audiences hope for in a costume drama about an affair in upper class society.

That's often the problem with these types of films: the only real issues that characters face are affairs and the potential shunning from their peers. Any other conflicts that they might face are rarely mentioned. The woman is usually the one to leave her husband or husband-to-be for another man, while the husband often doesn't care much about his wife and is only concerned with preventing a scene that would lower his social status. Knightley plays the titular Anna Karenina, wife of Alexei (Jude Law), who soon finds herself caught up in an affair with Count Vronsky (Aaron

Taylor-Johnson). The love Vronsky feels for her isn't initially returned, but after he follows her around Russia for a while, she soon finds herself infatuated with him. If there is anyone out there that hasn't gotten tired of the 'stalking equals love' message from *Twilight*, here's another film for you.

The story follows the exact generic route that one can expect from this type of film. The stodgy husband tries to hold it all together and the free-spirited woman wants to stay with her lover, with this conflict playing out until the end of the film when a permanent choice has to be made. The supporting cast has to find out about the affair and make a decision whether to shun or accept the decision that Anna makes, and that's about all the story has to offer. One interesting part of *Anna Karenina* is that there's a B-story that's almost completely contrary to the main one. Domhnall Gleeson plays a man named Konstantin, whose main goal is to woo Kitty (Alicia Vikander). Here, it's the man making all of the major decisions, and the payoff is completely different from what is expected. If there is a way *Anna Karenina*'s story separates itself from other costume dramas, it's here.

The other interesting and un-

courtesy Universal Pictures

common thing that *Anna Karenina* does is set many of its scenes on a stage, as if the characters are performing a play. It allows for some unique transitions, some enjoyable framing techniques and a unique visual style. The symbolic use of a stage could have also given additional insight into the characters, but the audience learns so little about them on a single viewing.

Most costume dramas are going

to look great, and *Anna Karenina* is no exception. The cinematography is gorgeous, the costumes look authentic, stylish and impressive, and the characters all act in ways that make you believe you're in Russia in the late 19th century — assuming you can buy into the fact that they're speaking English with various British accents, of course. This type of film needs to immerse its audience, especially when it's as slow-paced

as this one. It works well enough in this regard, even if it doesn't stand out.

The film is functional, approachable and it does enough in some areas to separate it from the pack, but it's still just a costume drama. If those aren't your kind of thing, it's not going to be worth seeing. However, if you do love costume dramas, *Anna Karenina* stands out as one of the best examples of the genre.

Christmas Comes Early with NogFest

NogFest

Dec. 3 - 7 in MacEwan Student Centre

Hard work on the academic front means it's time to celebrate that last week of classes. Welcome to NogFest — a week of fun activities starting Monday, Dec. 3. This year, your SU is giving away more than \$500 in club prizes to make your holidays a little sweeter.

Join us for a series of fun NogFest activities all week in the north courtyard of the MacEwan Student Centre (right outside of Stör) including:

- an ugly sweater relay race on **Monday** that will challenge you to perform those regular holiday tasks (wrapping presents, drinking hot chocolate, etc.) at breakneck speeds;
- our popular gingerbread house building competition on **Tuesday** where you will be given a starter kit and an hour to come up with a masterpiece to impress the judges;
- decorate-your-own gingerbread men on **Wednesday** and enjoy a tasty treat as you buckle down for all that studying;
- a snowman building contest in the TFDL Quad on **Thursday** (just so

you get a chance to enjoy that frosty outdoor weather); and

- Santa photos with your very own SU president, Hardave Birk, on **Friday**.

Also, anyone who wears an ugly sweater to the special holiday **Cinemanía** screening of **The Grinch** and **Edward Scissorhands** on Monday gets all the free popcorn they can eat!

And, last but certainly not least, the week will culminate with the annual **NogFest Cabaret at The Den**. Come and enjoy some festive eggnog and don't forget to get into the holiday spirit by wearing your ugliest Christmas sweater. You don't

have one? No worries, your SU will be selling some beauties all week long from 11 a.m. – 2 p.m. in the north courtyard. Proceeds of the sale, and from all other activities, will be donated to the Campus Food Bank.

So escape those last minute assignments, meet some new people, and show some campus pride at NogFest this year. **Visit the www.su.ualgary.ca for more information or email the SU events team at eventsteam@su.ualgary.ca. It's going to be a happy holiday, with a little help from your SU!**

The Students' Union advertisement is provided by the SU and published without Gauntlet editorial revision.

Player profile: Tamara Jarrett

Taylor McKee

Sports Editor • @TaylorMcKee_

Embarking on a tough British Columbia road trip from Nov. 30 to Dec. 1, the University of Calgary Dinos basketball team is one of the hottest teams in the entire country. The Dinos currently hold a top-10 Canadian Interuniversity Sport ranking. After losing two of three non-conference games in Nova Scotia, the Dinos have won 11-straight games, eight of which have been against Canada West opponents.

Heading into this season, the U of C women's basketball program had a lot of uncertainty. A new coach — Damian Jennings — replaced the legendary Shawnee Harle after 18 seasons coaching the Dinos program, including coaching the Dinos to a surprising fourth-place finish last season while hosting the CIS championships.

"This season has been going great, especially with a new season and a new coach. We all love and have bought into the new systems that [Jennings] has put in," said fourth-year kinesiology major and John Diefenbaker High School

graduate Tamara Jarrett. One of the team's offensive leaders, Jarrett averages 12.3 points and 5.6 rebounds per game. This season, the Dinos are off to one of their best starts in school history. Jennings has led the Dinos to a 13-2 record to start the season, including an unbeaten record in the CW conference.

"[Jennings] asks us to work hard but smart. We have to give 100 per cent in everything he asks of us but he is never unreasonable," said Jarrett.

Jarrett has also set specific goals for herself to achieve throughout the season, including the free-throw line where she is currently shooting a team best .794 — the best percentage for those who have taken over 20 free-throws.

As a fourth-year player, Jarrett is expected to be a leader on the team, a concept which she would rather communicate on the court.

"I would consider myself more of a demonstrative leader rather than a vocal leader," said Jarrett. "The chemistry on our team is amazing. All the girls listen to each other and respect each other's opinion so it is not too hard to be a leader by example and let oth-

ers lead vocally," said Jarrett.

The Dinos are an extremely exciting team to watch, focusing on offence and hustle in order to overwhelm opposing defences. The Dinos are second in the CW with an average of 78.1 points per game and outscore their opponents by an average of 10.7 points in each game. The Dinos also lead the CW in three-point percentage, shooting .364 from beyond the arc.

"We are definitely a scoring team. We play a five-out, motion system with not too many set offences," said Jarrett. "As a team, we have a goal to play to win the crowd with our hustle and our style of defence. As a team, we want to shock opposing teams with our defence," said Jarrett. Speaking to this aggressive style of offence and defence, the Dinos lead the CW in steals, turnover margin and offensive rebound percentage.

If the Dinos can keep up the pace that they have set for themselves early in this season, another trip to the CIS championships could be within their grasp.

The Dinos play the UBC Thunderbirds on Nov. 30 at Vancouver, BC and the UVIC Vikes on Dec. 1. at Victoria, BC.

Louie Villanueva

Louie Villanueva

Wickenheiser leading Dinos to another solid season

James Rose

Gauntlet Sports

On Nov. 22 and Nov. 23, the Dinos were able to win back-to-back games against the Mount Royal University Cougars. These wins improved the Dinos's Canada West conference record to 11-3 — good enough for a second-place ranking in Canadian Interuniversity Sport.

These wins are another step in the right direction for bringing the

team closer to its season goal of defending their first-ever CIS championship win.

Dinos centre Hayley Wickenheiser is widely considered to be the best women's hockey player in Canadian history.

Wickenheiser said that the U of C "should be the place to go" because of its status among prospective players.

Head coach and recent inductee to the International Ice Hockey Federations' Hall of Fame Danielle

Goyette shares a close bond with Wickenheiser. Wickenheiser said that Goyette was "the sole reason for playing for the Dinos." The two share a close friendship that was forged through playing on the same team on the international stage.

The first time that Wickenheiser and Goyette played together was during the 1998 Nagano Winter Olympics, where Team Canada won a silver medal. However, Wickenheiser said that,

while playing and practicing, their "relationship is kept strictly professional."

The presence of assistant coach Kelly Bechard has also been important for Wickenheiser. The two have past experiences winning gold at the 2002 Winter Olympics in Salt Lake City.

Traditionally, a popular route for Canadian female hockey players has been to pursue scholarships in the American NCAA system. This has been a major drawback

for Canadian universities.

Wickenheiser believes that this culture "is changing, but more scholarships are definitely needed" in order to lure more players into joining the CIS.

This season may be the last for Wickenheiser. She said that after playing with the Dinos she has her sights set on medical school to become a doctor. First, the Dinos have a chance to repeat as CIS champions and will enjoy every moment with Wickenheiser.

Soccer recruiting: the nature of the game

Curtis Wolff

Gauntlet Sports

Anyone who has been fortunate enough to watch FC Barcelona on the soccer pitch would likely be enchanted by effortless passing plays and tactical attacks. While marveling at the seemingly inherent chemistry between players like Lionel Messi and Cesc Fabregas, it is clear that these men have played together

at the legendary La Cantera youth academy.

It sounds like a dream come true for a child aspiring to be a superstar. Indeed, the successes of these academies are often judged by the quality and quantity of professional players they churn out. Unfortunately, the majority of these young athletes will never become professionals. They will be released by their academy while they are still teenagers, forgotten

now fully-ingrained into soccer culture. FIFA video games even have a youth academy function in their career modes.

While the careers of successful youth academy graduates are well-documented, the stories of those not selected are not as easy to find. Players who attended local academies are not of great concern — they likely continued at their own school during their youth careers and lived with their parents. Their experiences at a professional youth academy will probably go down as an interesting deviation in an otherwise normal childhood.

Of greater concern in this era of rapid globalization is the well being of children who are recruited from far away countries. Families can be separated or uprooted in the pursuit of soccer glory, with no guarantees of it working out. As the players grow into their early and mid-teens, the group is whittled down to only the most promising prospects. There is tremendous pressure on the young player to perform and make the sacrifices of his family worthwhile.

Soccer players only have to be 15 years old to sign a professional contract and start making some serious money. It is also the age when soccer clubs start treating them less like children and more like stocks, selling the contracts of the most promising players to wealthier clubs for a massive profit. Before turning 15, players are free to accept offers from other teams and leave with little or no compensation

for the club that has been training them. This is a problem in poorer countries, where top players — and multi-million dollar assets — are poached by European teams.

This dog-eat-dog model is unlikely to change fundamentally, but there are many possible ways to improve the system. Academies should strive to emulate Barcelona's method. Barcelona is renowned for the quality education they provide to their recruits. Their academy prides itself on not just developing great soccer players, but developing great people as well, regardless of whether they

make it as an athlete or not.

However, less wealthy academies don't necessarily have the funds to provide quality education to their players. This is why FIFA should introduce rules regarding mandatory compensation for clubs whose youth is poached by wealthy teams. This money can be designated for providing educational opportunities for young players in poorer countries regardless of their success as footballers. In this way, soccer can fulfill its potential to be more than just a business and tangibly improve the lives of youth through sport.

Louie Villanueva

since they were kids.

While some clubs buy their players in multi-million dollar transfers, Barcelona prefers to grow them. Barcelona scours the world for the best potential footballers. Children as young as eight are brought to live and train together

by the soccer world.

This is the nature of a competitive industry where club scouts are given the near impossible task of determining which fourth graders are most likely to develop into world-class midfielders. This method of player development is

The Champions League for dummies

Mark Villani

Gauntlet Sports

The battle among nations for Europe's most coveted prize is the Champions League cup of the Union of European Football Associations. The Champions League trophy is everything that a football player wishes for when they are playing in the park. The tournament takes place each year among Europe's elite clubs in leagues across 52 countries. It begins with standard qualifying rounds for teams that finish between second and fourth place in their respective leagues and also for many other league champions in lower-ranked nations.

The winners of each league in a high-ranked nation will automatically qualify for the next Champions League and are guaranteed a spot in the group stage depending on their UEFA coefficient ranking. A nation's UEFA coefficient determines the number of teams allowed to enter into the tournament from a particular country. UEFA coefficients are simply statistics that track how clubs from each nation have performed in the past five Champions League tournaments.

A nation like Spain is allowed a maximum of four teams to participate because of dominating squads like FC Barcelona and Real Madrid. Another country, like Poland for example, is allowed one berth in the Champions League, as their champions have been un-

able to win in qualification rounds for the past five years. This ranking system ensures that each country has a balance of teams that are the best of the best and will compete to become number one in Europe.

The coefficients are calculated by UEFA according to each club team's nationality and the performance quality of other clubs in their nation. The higher the coefficient ranking of a particular nation, the more club teams that are allowed to participate for that nation and the fewer qualification rounds those teams must play in to enter the tournament. In accordance with UEFA rules, no more than four teams are allowed to represent a single nation. However, there are exceptions to that rule because the defending champions of the tournament automatically qualify for the following year's tournament regardless of whether they qualify in their national league standings at the end of the season.

Qualifying is quite possibly the most intense part of the tournament, as the remaining 38 or so national champions of each league fight for a spot in the group stage. These league champions represent their nation as a whole in one single club team. This means that the league champions of those particular countries with one coefficient ranking are the only team able to participate for that country. Once crowned league champion, these teams with one UEFA coefficient will enter into a four-round, single-knockout process. In total,

38 or 39 league champions participate. Out of these teams, five spots are granted to the winners of qualifying and those five squads will move on to the group stage.

Clubs that finish second to fourth in their respective league in nations with coefficient rankings greater than one receive buys to later rounds. These 15 teams from every major European league play in two qualifying rounds with only five teams advancing. Once qualifying is over and clubs are knocked out, the remaining 10 clubs will join 12 league champions, six runner-up teams and three other third-place teams, all of which have the highest UEFA coefficient rankings in their respective nations.

The hundreds of clubs across Europe are now narrowed down to just 32 squads that are placed at random into eight groups of four. In each group, all teams will play each other twice, both at home and away. A win is worth three points, a draw worth one and a loss worth nothing. At the end of the round-robin, the top-two teams in each group advance to the round of 16, while the third-place team will enter into the UEFA Europa League. The first-place team of group A

will play the second-placed team of group B and so on, determining the winner based on the amount of goals after playing two matches. This two-leg format continues through to the quarter and semi-finals until reaching the coveted final, single-knockout game to determine the king of European football.

The Champions League is a remarkable battle of legacies. The pressure is incredible as club teams play fixtures in their season to win

the nation title, compete in national tournaments and continentally in the Champions League. Thus, a squad that qualifies for the Champions League at the end of their season may be completely different when they enter the tournament. The Champions League offers the thrill of rivalries that flare up among Europe's elite while underdog teams come out of nowhere to destroy dreams by beating all odds. It is truly the most exciting tournament in sports.

Stigmatizing the blues

The sad state of mental health care in Canada

Erin Shumlich
Editor-in-Chief

Canadian mental health care is abysmal. On May 8, 2012, Canada's first-ever national mental health strategy was released by the Mental Health Commission of Canada after five years of research, including consultations with thousands of people. This is a good first step, although long overdue, but Canadians have yet to see the benefits of its release.

Only seven per cent of Canada's health budget is allocated to mental health, which is not nearly enough for a set of illnesses that either directly or indirectly affect every Canadian. This is fewer than most OECD countries — New Zealand spends 10 per cent of its health funds on mental health and Australia recently added \$3.8 billion to its mental health fund. Before the strategy was released, Canada was, embarrassingly, the only G8 country without a national mental health strategy, and the current strategy continues to lag far behind other national mental health strategies.

The strategy suggests the federal and provincial governments increase their mental health spending to nine per cent of their overall health spending. The report also suggests a reconfiguration of mental

health care services and emphasizes recovery strategies. However, this is not enough, especially considering Prime Minister Stephen Harper's previous actions that adversely affect the mentally ill, including his tough-on-crime strategy that essentially further institutionalizes the mentally ill.

Loss of productivity due to mental illnesses was worth \$51 million in 2011, according to the Centre for Addiction and Mental Health. A national mental health strategy could reduce this economic gap. Currently 80–90 per cent of those with a serious mental illness are unable to work, according to the Canadian Mental Health Association, but through proper treatment they will be able to enter the work force. Even if the Harper government disregards the mental well being of its citizens, as it clearly has so far, the economic impact of mental illness

alone makes mental-health coverage worth it.

Currently, pharmaceutical drug pushing has been the primary treatment. However, drugs should complement or be secondary to therapy in order to give patients long-term coping strategies.

Suicide accounts for 24 per cent of deaths among 15–24 year olds, the age of most university undergraduates, making it the second leading cause of death after motor vehicle accidents. Why, then, is there not more being done about this tragic epidemic?

The University of Calgary Wellness Centre works on a brief-counselling model, meaning that students have 10 free therapy sessions during their undergraduate degree. Given the severity and range of mental illnesses, this model is not enough to support those who need help. Although there are few

means of financial support, students simply can't afford therapy sessions.

Canadians, and especially students, should never have to choose between drugs and therapy. Both should be offered universally — the benefit to the general well being of Canadians and to the economy is incontrovertible.

The federal and provincial governments need to start showing they care about something that at least 20 per cent of Canadians experience in their lifetime.

Until the government starts taking action, an inherent mental health stigma will continue to exist in Canadian society. What we can do as concerned citizens can only go so far, however, that doesn't mean we should stop pushing for change. By creating discourse, Canadians can begin to tackle stigma and continue down a path of acceptance and proper mental health care. The mental health strategy outlines specific goals that are long overdue, but it lacks concrete steps of how to achieve them and is not nearly enough to give Canadians the resources they need.

Only one in five Canadian youth who experience a mental illness receives help — more services need to be available. Universal health care makes Canadians proud of their nationality, however, stopping at mental health is an embarrassing black mark and a stigmatizing double standard that can no longer be ignored.

The abortion debate minus religion

Jarrett Spiker

Gauntlet Opinions

One of the most controversial debates of our day is pro-life versus pro-choice. Perhaps this is because neither side — those for the legalization of abortion, and those opposed to it — has any trumping argument. Unlike some issues, like gay marriage that focuses on equal rights, the debate over abortion is concerned with the most fundamental human rights. Does a woman have a right to choose what happens to her body, or does the unborn fetus have the right to be born?

It is certainly a topic that warrants extensive discussion. However, legitimate discussion has become increasingly rare, as the debate becomes less of a social one and more of a religious one. It has become commonplace to assume that theists are

pro-life and atheists are pro-choice, which makes the argument religion-oriented and less of a social justice question. This is not the structure for a healthy debate, and can't lead to a proper solution. The central question of the debate on abortion is whether a fetus should be considered a human. Obviously it is illegal and immoral to kill an innocent human, but can a fetus, something that has never taken a breath, really be considered alive in the first place? From a religious standpoint, life is created at the moment of conception, whereas, from a scientific perspective, the fetus does not become human until birth.

Either point can be argued, with or without taking religion into account. Looking past religion, there is one question we should ask: If it can be argued that some action will directly cause the end of an innocent life, should that action be taken?

The moral answer is clearly no. If it can be argued that an act could be considered murder, then that action should not be taken, regardless of personal opinion. Even if you don't think you are killing someone, if the guy next to you does, that should be moral reason enough not to go through with it.

Therefore, it can be argued that abortion is killing someone. That's why there's a debate. Even if, from a pro-choice perspective, it is easy to disagree with the religious perspective, it is certainly much more difficult to say that people from the pro-life side have no point.

If we take this moral view — that abortion is killing someone — it should be illegal. However, there are many extenuating circumstances that present challenges to this view. The occurrence of pregnancies due to rape is undeniable. Unwanted preg-

nancies, although the product of irresponsibility, can also lead to unwanted children. These circumstances present all sorts of problems.

What we as a society should really focus on is addressing the problems that would arise from banning abortion, like child neglect and abuse, rather than taking the easy route of saying that abortion is a necessary evil. For the time being, perhaps it is, but that may not always be the case. We should make contraceptives more widespread and place more funding into alternative forms of dealing with an unwanted pregnancy, such as adoption.

The sad reality is that no matter what side of the argument you are on, an end to the debate will not result in an ideal solution. Perhaps, though, we can focus on creating options that preserve morality as well as freedom.

Rampant hair loss strikes campus

Sarah Dorchak
Gauntlet Health

Doctors and scientists alike are baffled at the recent spike in hair loss of University of Calgary students. The praecalvustis epidemic reportedly silently hit the campus in late October, but according to doctors, the disease does not flare up for several weeks.

"Many students could be carriers without knowing it," said Dr. Frank Bateman, a physician at a walk-in clinic near campus. "The bacteria build up for a few weeks to a month in the cranial system. Once a flare up occurs, there's no stopping it."

Bateman explained that a common first symptom is sharp headaches located in the "frontal lobe."

"Most people experience pain that they usually assume is a stress headache, but it's actually the bacteria infiltrating the brain's defences."

Just before breaking out, patients reported a tingling sensation above their foreheads. First-year business student Marcie Glaber was the first

U of C student to be diagnosed with praecalvustis disease, now also known as "Glaber disease."

"The doctors are calling me this century's Typhoid Mary," Glaber explained behind her government issued quarantine bubble-dome.

"How was I supposed to know headaches and hair loss came from bacteria? I thought I was just stressed out! I had a finance midterm that week!"

U of C biology professor Brad Scott acknowledged how difficult it is to determine when someone is experiencing symptoms of a new disease. "When you've never been exposed, oh, sorry, bad choice of words," he said, shying away from quarantined balding students.

"When there's no medical research or documentation on a new kind of bacteria, it's very difficult to determine the symptoms associated with that bacteria."

"Glaber disease took us all by surprise," added Scott. "At least the semester's almost over and the diagnosed students won't have to be quarantined anymore."

Quarantine stations are located throughout campus, including in MacHall and Math Sciences. Authorities considered quarantining all of the U of C, as Glaber disease appeared to be only affecting the 18- to 24-year-old demographic in the area.

"The students that we've diagnosed with Glaber disease all seem to be younger," said Dr. Daniel Furter, a doctor volunteering his time from the Peter Lougheed Centre to research the disease. Furter was not sure why younger students were being targeted by Glaber disease.

"It could be a question of what the Glaber bacteria prefer, or could be related to immune systems, but also could be related to how Glaber is spread from person to person," he said.

Doctors and scientists are attempting to pinpoint how Glaber is spread, but the facts are still hazy.

"The bacteria seem to like strong caffeinated drinks, like coffee or tea, and also appear to thrive well in dry areas. This leads us to believe libraries and study rooms are

the culprits," said Furter.

He explained that all the diagnosed students had been studying for midterms when exposed to Glaber disease.

"Older students may feel more confident about their studies and are generally less stressed," Furter said. "Those students would not feel the pressure to spend over 12 hours in a library."

"I'm a doctor, not a sociologist, but I'd bet that some of these diagnosed students are even in the same study group."

Second-year English student Mark Berg was diagnosed earlier this month and admitted to working with Marcie Glaber in a

GRST 209 study group.

"I took it as a fun elective," Berg said. "I never imagined that interacting with other majors could lead to being quarantined."

Students diagnosed with Glaber disease are being kept quarantined in bubble-domes. The students are free to roam around, and both food and water are provided.

If you or someone you know is complaining of headaches or tingling sensations near their forehead, both Furter and Bateman encourage quarantine.

"We're taking no chances here," said Furter. "The last thing we need is the U of C represented by baldees."

KIRTAN YOGA

Meditation by chanting Sanskrit Mantras

Kirtan, is the singing of sacred mantras, accompanied by classical Indian instruments and some Western instruments (such as the guitar, flute, violin, saxophone). It is a call-and-response style of singing which involves the audience in the performance. The leader sings one line or verse and the guests chant in response. It is an ancient and well-known art to calm the mind, open the heart and connect with the Divine Consciousness. It is a culture where everybody can take place and make their own spiritual experience.

Every Friday

From 5:30pm to 8:00pm

**Large Prayer Room MSC 317a
MacEwan Student Centre
University of Calgary**

FREE ADMISSION

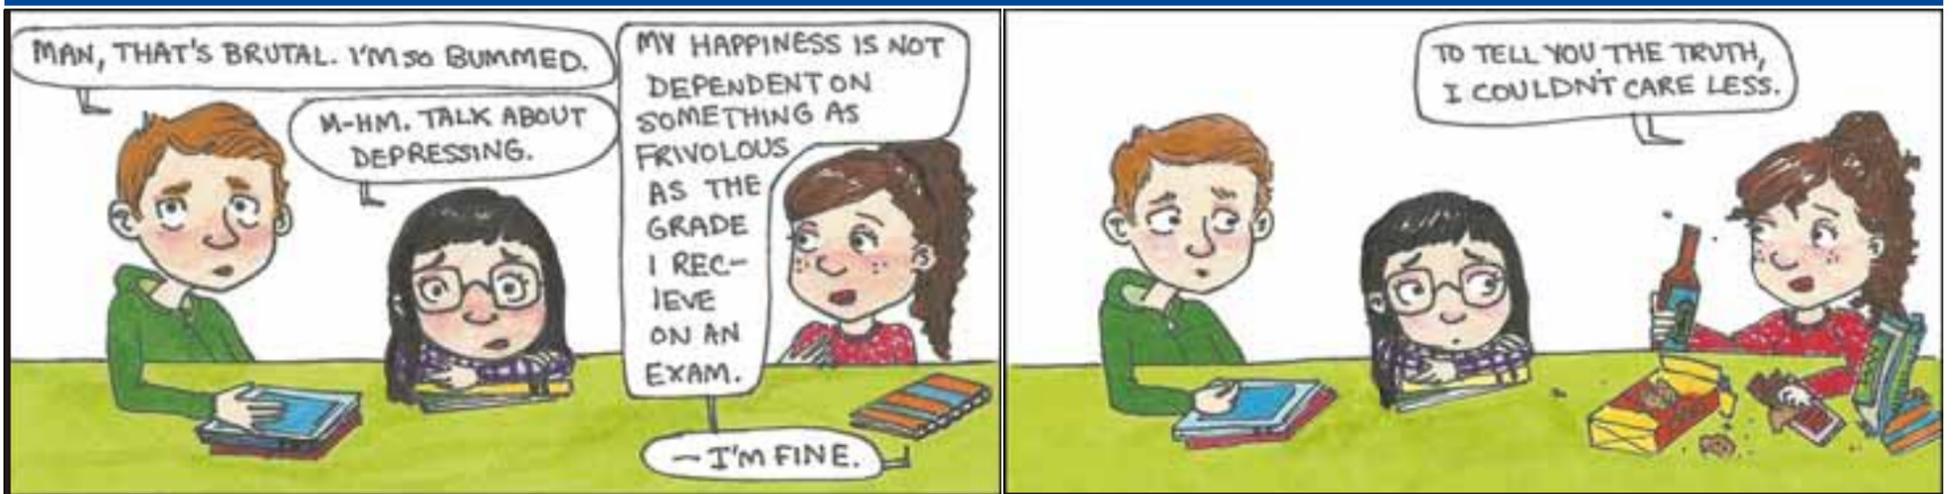

Everybody is Welcome!
